

Opening an Indian Restaurant in Queens, NY

June 2019

1 Introduction

In a city of New York, if someone is looking to open an Indian restaurant, recommend that where they should open it. The intention is to open this restaurant in Queens borough as there is a general knowledge and understanding that there is high Indian population in Queens, NY.

1.1 Background

Opening a new restaurant can be daunting. There are so many things to consider – from choosing the right location to finding financing to selecting the right name. And, of course, buying equipment and hiring staff. The first step in opening a new restaurant is deciding what type of restaurant it is going to be. Do you want to open a high-end fine dining restaurant? A casual 1950s-style diner? Do you have a specific type of cuisine in mind, such as Italian, French, or Indian?

Before a lease is signed for a restaurant's location, homework must be done. Is the restaurant location in a busy area with plenty of foot traffic? If not, is there enough parking? Have several other restaurants opened and closed in the same spot?

The most enjoyable part of opening a new restaurant can be selecting a restaurant name that means something to you. It can be a family name, a play on words, another meaningful turn of phrase, or it can reflect the theme or location you chose, such as Broadway Diner or The Highlands. But if it turns out that it wasn't a good location for a type of restaurant you are decided to open, all the efforts will go waste and it could cost a lot of money.

1.2 Problem

New York has is multicultural city and with many neighborhoods. It has many ethnicities and indeed a large Indian community. It would advantageous to predict whether an India restaurant would be a good choice to open and if so, whether Queens borough would be a good location. The project aims to determine whether Indian restaurant is a right choice in Queens, NY.

1.3 Interest

Obviously, the restaurant opener would be very interested in knowing where to open the restaurant for competitive advantage and business values. Others who are interested in opening any type of restaurant also may also be interested. It would also be good to know what other popular venues in Queens, NY.

2 Data

2.1 Data Sources

New York primary has 5 boroughs and 300+ neighborhoods. In order to determine whether Queens, NY is a good location to open the Indian restaurant, we will segment and explore the neighborhoods. The dataset that will be used can be found [here](#). We will then use Foursquare API to explore the neighborhoods and determine the Queens, NY is a good location to open the Indian restaurant. We will use the explore function to get the most common venue categories in each neighborhood, and then use this feature to group the neighborhoods into clusters. I will use the k-means clustering algorithm to complete this task. I will also use scatter, box plot, histogram etc. diagrams and also develop distribution using linear regression if necessary.

2.2 Data Cleaning and Exploration

Neighborhood has a total of 5 boroughs and 300+ neighborhoods. In order to segment the neighborhoods and explore them, we will essentially need a dataset that contains the 5 boroughs and the neighborhoods that exist in each borough as well as the latitude and longitude coordinates of each neighborhood.

Data will be downloaded from above source. Will convert addresses into their equivalent latitude and longitude values. Also, will use the Foursquare API to explore neighborhoods in New York City. Will use the explore function to get the most common venue categories in Queens neighborhood, and then use its features to group the neighborhoods into clusters.

2.3 Feature Selection

It was obvious that relevant data is in the features key, which is basically a list of neighborhoods. Below are some sample features key data for Queens neighborhood.

3 Exploratory Data Analysis / Methodology

As part of exploratory data analysis, NY and Queens map were created.

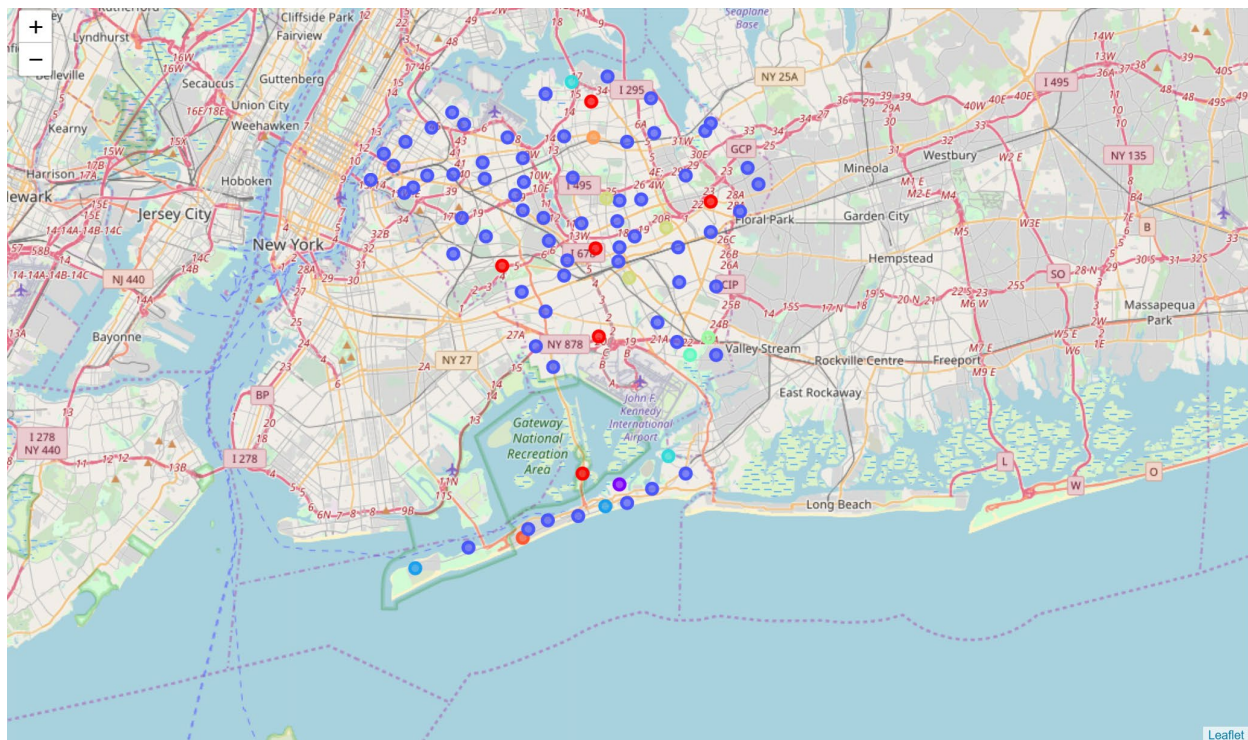

For illustration purposes, the map was simplified, segmented and clustered for only the neighborhoods in Queens.

Unique neighborhoods of Queens ['Astoria' 'Woodside' 'Jackson Heights' 'Elmhurst' 'Howard Beach' 'Corona' 'Forest Hills' 'Kew Gardens' 'Richmond Hill' 'Flushing' 'Long Island City' 'Sunnyside' 'East Elmhurst' 'Maspeth' 'Ridgewood' 'Glendale' 'Rego Park' 'Woodhaven' 'Ozone Park' 'South Ozone Park' 'College Point' 'Whitestone' 'Bayside' 'Auburndale' 'Little Neck' 'Douglaston' 'Glen Oaks' 'Bellerose' 'Kew Gardens Hills' 'Fresh Meadows' 'Briarwood' 'Jamaica Center' 'Oakland Gardens' 'Queens Village' 'Hollis' 'South Jamaica' 'St. Albans' 'Rochdale' 'Springfield Gardens' 'Cambria Heights' 'Rosedale' 'Far Rockaway' 'Broad Channel' 'Breezy Point' 'Steinway' 'Beechhurst' 'Bay Terrace' 'Edgemere' 'Arverne' 'Rockaway Beach' 'Neponsit' 'Murray Hill' 'Floral Park' 'Holliswood' 'Jamaica Estates' 'Queensboro Hill' 'Hillcrest' 'Ravenswood' 'Lindenwood' 'Laurelton' 'Lefrak City' 'Belle Harbor' 'Rockaway Park' 'Somerville' 'Brookville' 'Bellaire' 'North Corona' 'Forest Hills Gardens' 'Jamaica Hills' 'Utopia' 'Pomonok' 'Astoria Heights' 'Hunters Point' 'Sunnyside Gardens' 'Blissville' 'Roxbury' 'Middle Village' 'Malba' 'Hammels' 'Bayswater' 'Queensbridge']

Then the original dataframe was sliced and new dataframe created for the Queens data. Then geographical coordinates of Queens then gathered from geolocator. After that, Foursquare APIs were utilized to explore the neighborhoods and segment them. For that function was created to repeat the same process to all the neighborhoods in Queens and get the top venues within 5000 meters. New dataframe of the venues was created for Queens venues. The number of unique categories were calculated from the all returned venues. All the rows were grouped by neighborhood and by taking the mean of the frequency of occurrence of each category. Then top 25 venues for each neighborhood were printed. All the venues were sorted in descending g order. Then new dataframe was created to display the top 25 venues for each neighborhood. k-means was run to cluster the neighborhood into 10 clusters. Another dataframe was created to include the cluster as well as the top 25 venues for each neighborhood. Resulting clusters were visualized in a map.

4 Conclusion

In this study, I analyzed the neighborhoods of Queens borough of NY and tried to understand what type of top venues there are and how they are clustered. This data helped to determine whether there is an opportunity to open an Indian restaurant in Queens. The data gathered were eyeballed to determine the next steps. Further analysis to categorize venues, specific distances among them may predict better. Regression analysis maybe performed as well.

Above analysis should have shown a good number of Indian restaurants in top 25 venues and 10 clusters. But that does not seem to be case. The cluster data and top venues indicate that there is definitely an opportunity to open up an Indian restaurant in Queens borough. There are enough venues around which can also increase the foot traffic to the Indian restaurant.
